Table 1: Detection and fairness performance (%) on **FairForge-2** (public SELECT/validation, seed 17), trained on FairForge-2 public TRAIN. Fairness is computed over the 8 sex × age (<30/30+) × race (White/Non-White) intersectional subgroups, as in FairForensics (arXiv 2608.01661) Table III, plus four extra diagnostic columns: es-AUC (AUC discounted by its spread across groups), the plain FPR/TPR max−min gap in percentage points, and the AUC of the single worst-performing group. Lower fairness scores and gaps indicate better demographic fairness; higher AUC/es-AUC/worst-group AUC means better detection. **Bold** and underline denote the best and second-best results per column. All rows share one architecture (Xception, 20.81M parameters), so the comparison isolates the training objective. These are validation, not TEST, scores; no result here has been evaluated on TEST.

		FairForensics Table III metrics					Extra diagnostics				
Model Type	Detector	$F_{\text{FPR}}\downarrow$	$F_{\text{MEO}}\downarrow$	$F_{\text{DP}}\downarrow$	$F_{\text{OAE}}\downarrow$	AUC↑	es-AUC↑	FPR gap↓	TPR gap↓	Worst-group AUC↑	Params (M)
